## DETAILED ACTION

1. Claims 1-3, 6, and 11-13 are allowed over prior art of record and in light of applicant's arguments filed on February 03, 2009.

### *Reasons for Indicating Allowable Subject matter*

2. The following is the examiner's statement of reason of allowance: The prior art of record to Donnelly discloses a system having a user interface through which a user can select an action in order to invoke a desired operation, and to a method of operation of such a computer system. The action is selectable by one or more views provided via the user interface, and the system comprises generation means for representing an action by an action object, the action object defining, for each available view that can be employed to represent that action, the attributes required to provide that view, and an identifier to identify the operation to be invoked upon selection of the action.

Nakajima discloses an operating system provides extensions through which application developers may extend the capabilities of a shell of the operating system. For example, application developers may add menu items to context menu for objects that are visible within an integrated system name space.

Abdelnur discloses one or more embodiments of the invention provide for the defining of information relating to a GUI's menu bar, tool bar, and action bar. Such user interface information may be provided in a properties file. One or more embodiments of the invention utilize the properties file to build the GUI menu bar, tool bar, and action bar.

Marcos discloses a graphical user Interface (GUI) and accompanying functionality for binding Web page definitional elements to a back-end state (e.g., client- or server-side back-end state) and custom logic is provided. In one embodiment, a template containing definitional elements, custom logic, and bindings are generated that define all or a portion of a Web page based on input received and functionality provided by the invention.

The examiner, upon searching a variety of databases, respectfully submits that the combination of Donnelly, Nakajima, Abdelnur, and Marcos fails to disclose or suggest “traversing a hierarchical tree to connect the input sequence to the associated action via the command binding”;

“When the command binding is not found, bubble and tunnel the input sequence to a next higher or lower node in the hierarchical tree”. These limitations in combination with the other claims limitations were not disclosed by, would not have been obvious over, nor have been fairly suggested by the prior art made of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phenuel S. Salomon whose telephone number is (571) 270-1699.
